Ta dokument je namenjen kot dopolnilo navodilom za namestitev in uporabo izdelka.
Ta navodila posebej podpirajo Flamcomat G4 glede varnosti, uporabe in delovanja.

Navodila za montažo in dodatno dokumentacijo v različnih jezikih najdete na spletnem mestu www. flamcogroup.com/manuals. Dodatne informacije o proizvodnji lahko dobite v ustrezni podružnični pisarni podjetja Flamco.

Splošno

Informacije o storitvi

1. Pravilna uporaba

Nadzorno enoto Flextronic uporabljajte v skladu s tem priročnikom. Izjava o skladnosti iz prvotne dokumentacije je še vedno veljavna.

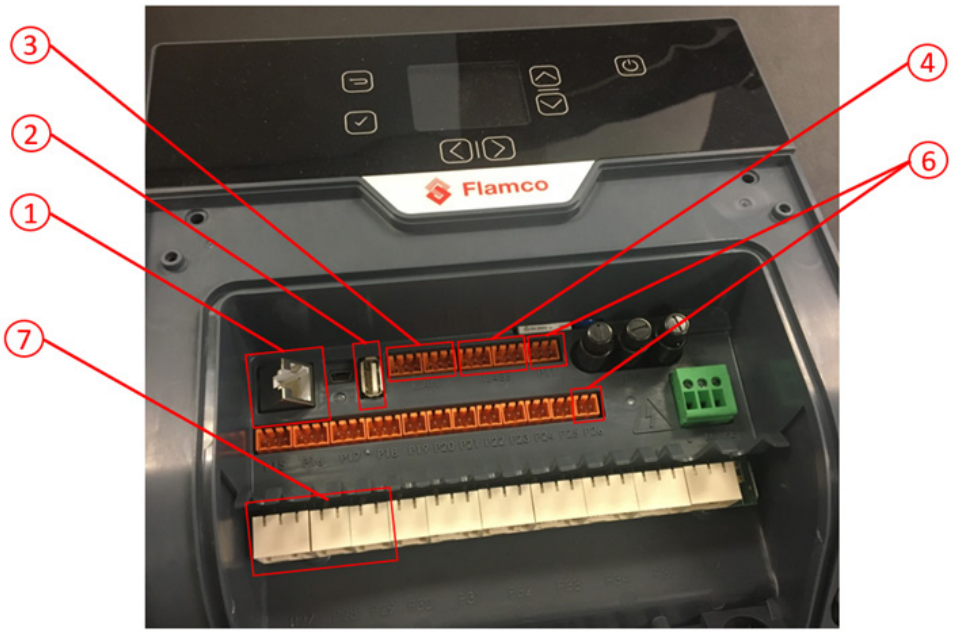
2. Opis izdelka

Flextronic je univerzalna krmilna enota za avtomate Flamco.
Ima širok razpon komunikacijskih možnosti, ki jih lahko vklopite v meniju z dodatki Flextronic:

1. Ethernetna vrata za integracijo BMS, za komunikacijo po protokolu Modbus ali BACnet.
2. Vrata USB za shranjevanje operativnega dnevnika ali posodobitev vdelane programske opreme.
3. Vrata Canbus (parjena za verigo) za medsebojno povezavo več avtomatov Flamco.
4. Vrata RS-485 (parjena za verigo) za povezavo storitve Flamco Remote Service Gateway (Flamconnect) ali tudi za integracijo BMS preko Modbusu ali BACneta.
5. Brezžični vmesnik (2.400…2.485 GHz) za parjenje s pametnim telefonom ali tablico.
6. Analogni napetostni izhodni signali za daljinsko prikazovanje nivoja posode in tlaka v sistemu (0–10 V).
7. Digitalni (diskretni) izhodni signali (250 VAC, 5 A maks., brez potenciala). Napake in opozorila po meri lahko nastavite na tri vrata v meniju Flextronic Alarms.

Neopredeljena vrata so namenjena za določene dodatke avtomata ali za druge operativne namene.
Ne uporabljajte jih za vmesnike za stranke ali komunikacijo.

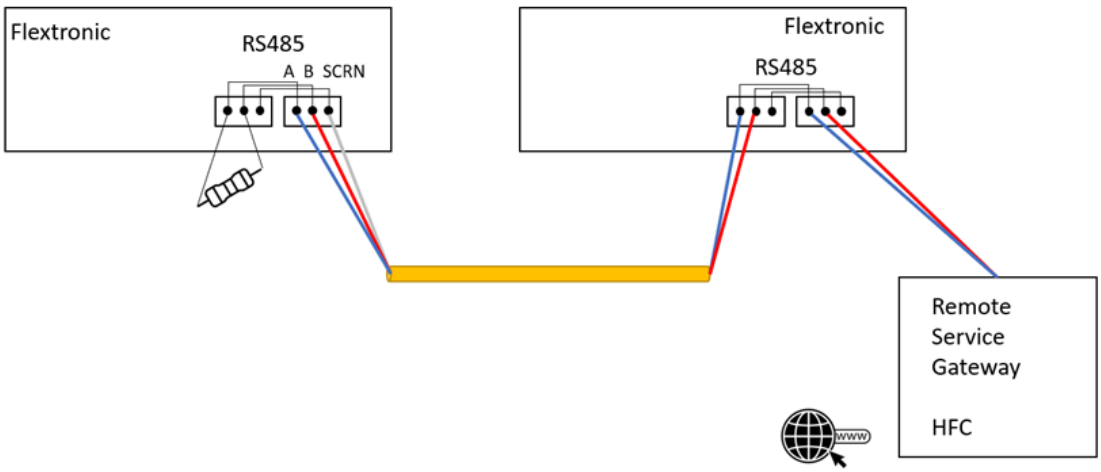
2.1 Podrobnosti ožičenja



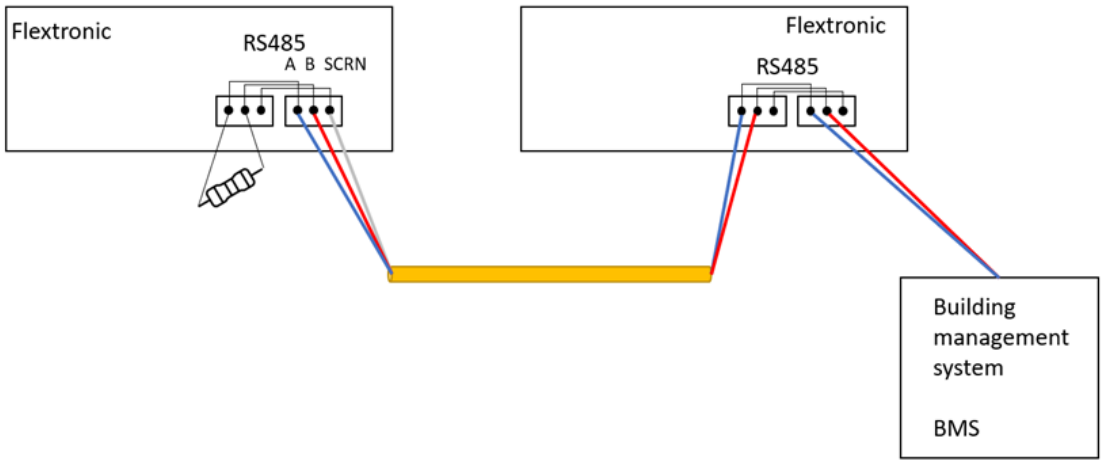
Namestitev, obdelavo podatkov in zagon mora opraviti usposobljeno, kvalificirano in sposobno osebje. Upoštevajte veljavne nacionalne standarde, predpise in pravila. Navodila za montažo in dodatno dokumentacijo v različnih jezikih najdete na spletnem mestu www.flamcogroup.com/manuals.

- Dodatni kabli niso vključeni ali dobavljeni s strani podjetja Flamco.
- Flamco priporoča uporabo zavitega enojno zaščitenega kabla.
- Zaključni upor ima vrednost 120 Ohmov.
- Najdaljša dovoljena dolžina kablov je 500 m.

2.2 Prehod Flamconnect

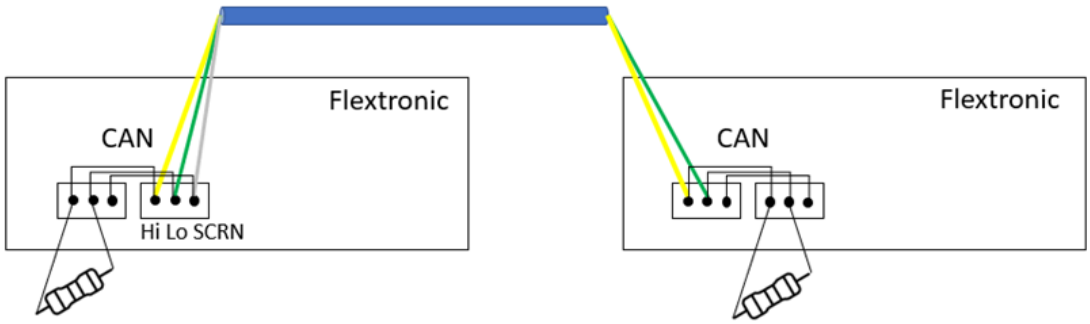


2.3 Povezljivost BMS Modbus & BACnet



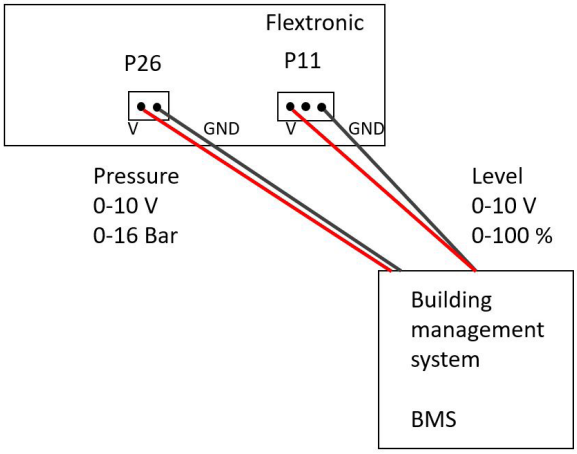
Na RS-485 BUS ni možna hkratna komunikacija preko Modbusa in BACneta. Če sta potrebna oba protokola, mora eden od protokolov teči preko povezave ethernet (IP).
Pri uporabi storitve Flamconnect Remote Service Gateway so tej funkciji namenjena vrata RS485. Če sta potrebna tudi Modbus ali BACnet, lahko to dosežete le preko povezave ethernet (IP).

2.4 Medsebojno povezani avtomati Flamco



2.5 Analogni izhodni signali (stranka)

Za pridobitev napetostnega analognega signala sistemskega tlaka in nivoja posode.



2.6 Digitalni (diskretni) izhodni signali

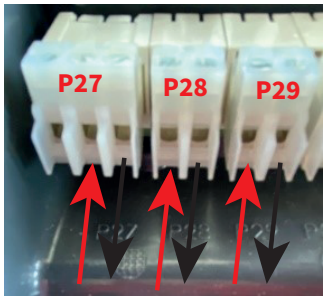
GUI settings:
Invert polarity: off

Specifications of VFC:
5A @ 240VAC (non-inductive)

Incoming signal from BMS

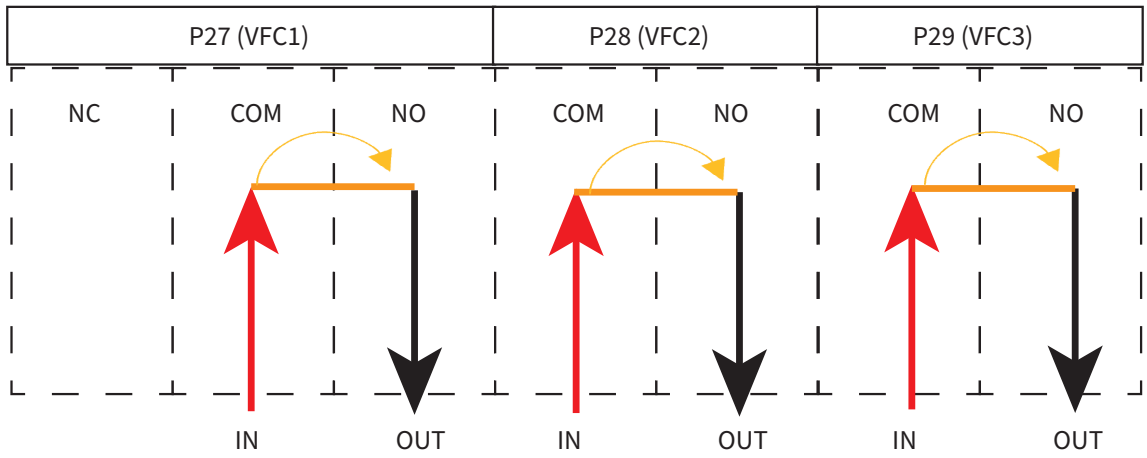
Returning signal to BMS

relay



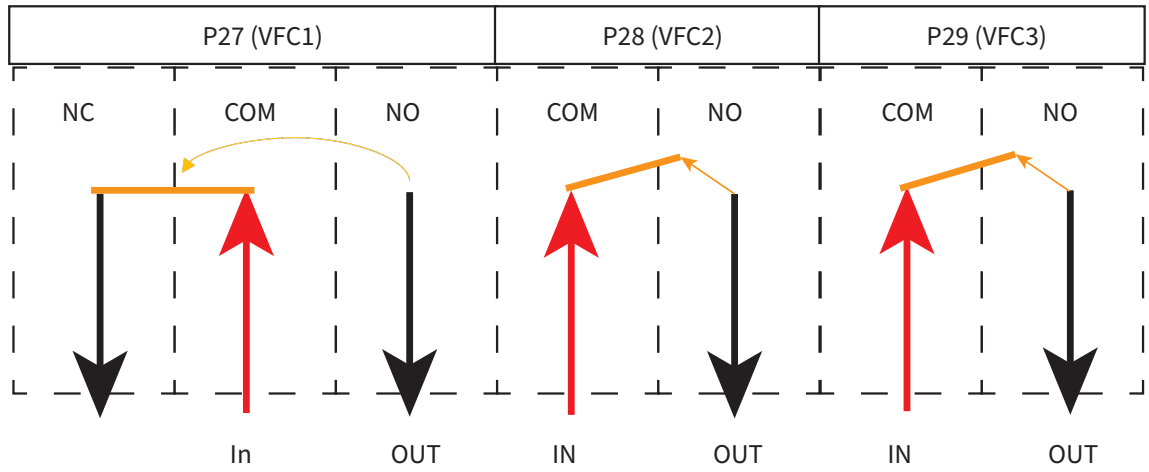
No Fault

(NO) Relay closed at (NO) OUT when controller powered up and running without error



Faulty

(NO) Relay openend at (NO) OUT when controller is powered down, running with error or cable broken



Za pridobivanje stanja avtomata. Poljubno nastavljivo sporočilo o napaki lahko dodelite vsakemu izhodu. Izhod P29 je zaporni signal kotla v načinu >110 °C, v tem načinu ni na voljo za alarmiranje.

3. Brezžična konfiguracija in nastavitve

Konfiguracija je mogoča z aplikacijo Flamconnect.

Za paritev: vnesite geslo (Passcode). Lahko se nahaja na nalepki kode QR na avtomatu ali pa ga prikažete na zaslonu.

	Informacije o sistemu	Za spremljanje informacij o avtomatu in krmilniku	

Konfiguracija uporabniških vmesnikov in komunikacijskih protokolov je dostopna v meniju krmilnika.

	Dodatki	Za vklop naprednejših dodatkov avtomata	

Pridržujemo si pravico do spremembe zasnov in tehničnih specifikacij svojih izdelkov.

3.1 Nastavitve komunikacijskega vmesnika

Ethernet:

Naslov IP	192.168.100.150
Maska IP	255.255.255.0
Prehod IP	192.168.100.1

RS-485:

Flextronic je podrejen.

ID naprave	izbirno
Baudna hitrost	19.200
Parnost	8-n-1

Istemu vmesniku lahko naenkrat dodelite samo en protokol. Ko je storitev Remote Service Gateway povezana, Modbus in BACnet nista na voljo preko RS-485. Za integracijo BMS raje uporabite vrata ethernet.

3.2 Digitalno (diskretno) izhodno programiranje

Potencialno prostim digitalnim (disktretnim) izhodom je mogoče dodeliti napake po meri (napake in opozorila). Če je istemu izhodu dodeljenih več napak, izhod postane aktiven, če je za ta izhod aktivna katera od dodeljenih napak.

Konfiguriranje napak je na voljo v meniju Flextronic:

	Alarmi	Za dodelitev alarmnih sporočil relevantnim morebitnim prostim izhodom
